

Dr. Krishna is a Stadtman Investigator at the Surgery Branch Center for Cancer Research at the National Cancer Institute, USA. He completed his Ph.D. in Biological Design with a focus on Immunology from Arizona State University, and subsequently a cancer research training award for a post-doctoral research fellowship in the lab of Dr. Steve Rosenberg. Dr. Krishna has a broad background in human immunology with expertise in developing cellular immunotherapies against metastatic solid tumors. His research is focused on studying antitumor T cells targeting tumor-specific neoantigens, T cell differentiation states within human tumors, and immune resistance by tumors.
